

MONTHLY QA INTERNSHIP REPORT.

Intern Name: Awantika Ghising

Department: Quality Assurance (QA)

Reporting Period: Month 1

Project: QA Training and Application Testing Activities

Executive Summary

During this month, I gained practical experience in Software Quality Assurance by working on requirement analysis, test documentation, test design, and application testing activities. The work was divided into four weeks, focusing on understanding QA fundamentals, preparing test artifacts, and performing real-world testing on mobile and web applications.

Week 1: QA Fundamentals and Documentation

Objectives

- Understand Software Testing and QA concepts.
- Learn software development and testing life cycles.
- Create foundational QA documents.

Activities Completed

1. Uber Application Module Analysis

Studied the Uber application and identified its major modules, including:

- User Registration & Login
- Profile Management
- Ride Booking

- Ride Tracking
- Fare Estimation
- Payment Management
- Trip History
- Notifications
- Customer Support
- Settings

2. QA Fundamentals Study

Covered basic QA concepts:

- Software Testing Fundamentals
- SDLC & STLC
- Testing Types
- Test Scenario Creation
- Test Case Design
- Defect Life Cycle
- Severity & Priority
- QA Documentation Standards

3. Test Scenario Preparation

Prepared functional test scenarios for multiple Uber modules to validate business requirements and user workflows.

4. Bug Report Template Creation

Created standardized bug reporting templates including:

- Bug ID
- Summary
- Environment
- Preconditions
- Steps to Reproduce
- Expected Result
- Actual Result
- Severity
- Priority
- Status
- Screenshots/Attachments

- **Deliverables**

- ✓ Application Module List
- ✓ QA Fundamentals Notes
- ✓ Test Scenarios
- ✓ Bug Report Template

Week 2: Tootle Application Test Design

Objectives

- Convert requirements into test scenarios and detailed test cases.
- Create supporting QA documentation.
- Create the app modules.

Activities Completed

1. Test Scenario Creation

Prepared comprehensive test scenarios covering:

- Authentication
- Profile Management
- Booking Process
- Navigation
- Payment Flow
- Notifications
- Error Handling

2. Detailed Test Case Development

Created detailed test cases with:

- Test Case ID
 - Module Name
 - Preconditions
 - Test Steps
 - Test Data
-
- Expected Results
 - Priority

3. Test Data Preparation

Prepared test datasets for:

- Valid Inputs
- Invalid Inputs
- Boundary Val
- Empty Fields
- Duplicate Data
- Special Characters

4. Traceability Matrix Preparation

Developed a Requirement Traceability Matrix (RTM) to map:

- Requirements
- Test Scenarios
- Test Cases
- Test Coverage Status

Deliverables

- ✓ Test Scenarios
 - ✓ Detailed Test Cases
 - ✓ Test Data List
 - ✓ Traceability Matrix (RTM)
-

Week 3: HamroBazar Application Testing

Objectives

- Perform functional testing on a real-world application.
- Validate key user journeys and business functionality.

Activities Completed

1. Application Study

Analyzed HamroBazar modules:

- User Registration
- Login
- Search
- Product Listing
- Category Navigation
- Product Details
- Messaging
- Profile Management
- Notifications

2. Smoke Testing

Executed smoke test cases to verify:

- Application Launch
- User Authentication
- Navigation
- Search Functionality
- Product Viewing

3. Functional Testing

Executed functional test cases for:

- Registration
- Login
- Product Search
- Product Filtering
- Product Details
- User Profile
- Navigation Flows

4. Defect Identification

Documented issues found during testing and reported observations with proper defect documentation.

Deliverables

- ✓ Smoke Checklist
- ✓ Functional Test Execution
- ✓ Defect Reports

Week 4: HamroBazar Advanced Testing & Documentation

Objectives

- Perform comprehensive validation of application features.
- Improve test coverage and documentation quality.

Activities Completed

1. Regression Testing

Prepared and executed regression testing checklists covering major modules.

2. Negative Testing

Performed negative test validation for:

- Empty Inputs
- Invalid Data
- Special Characters
- Duplicate Entries
- Boundary Conditions

3. Test Execution Summary

Tracked and documented:

- Total Test Cases Executed
- Passed Cases
- Failed Cases
- Blocked Cases
- Defects Logged

4. QA Documentation Enhancement

Updated testing artifacts and improved documentation quality for future testing cycles.

Deliverables

- ✓ Regression Checklist
- ✓ Negative Test Cases
- ✓ Execution Summary Report
- ✓ Updated QA Documents

Skills Acquired

Manual Testing

- Functional Testing

- Smoke Testing
- Regression Testing
- Negative Testing
- Exploratory Testing

Documentation

- Test Scenarios
- Test Cases
- Traceability Matrix
- Test Data Preparation
- Bug Reporting

Monthly Outcome

Throughout this month, I successfully completed QA learning and practical testing activities involving Uber, Tootle, and HamroBazar applications. I developed strong skills in test documentation, test design, requirement traceability, manual testing, defect reporting, and execution reporting. The hands-on experience enhanced my understanding of real-world QA processes and prepared me to contribute effectively to software quality assurance projects.

Status: Successfully Completed
