

Bug Report

Uber QA — use with Feature Matrix & Test Scenarios

1. Summary

Bug ID	<i>BUG-0001</i>	Date Reported	<i>YYYY-MM-DD</i>
Reported By	<i>Your name</i>	Status	<i>New / Open / In Progress / Fixed / Closed / Won't Fix</i>
Title / Summary	<i>Brief one-line description of the bug</i>		
Assigned To	<i>Developer / team name</i>	Target Fix	<i>Release version or sprint</i>

2. Classification

App	<i>Rider / Driver / Uber Eats / Platform</i>	Category	<i>e.g. Booking, Trip, Payments</i>
Feature	<i>Feature name from Feature List sheet</i>	Feature ID	<i>F-001</i>
Scenario ID	<i>TS-0001 (if found during test execution)</i>	Priority	<i>P0 / P1 / P2</i>
Severity	<i>Critical / High / Medium / Low</i>	Frequency	<i>Always / Often / Sometimes / Rarely</i>

3. Environment

Platform	<i>iOS / Android / Web</i>	OS Version	<i>e.g. iOS 18.2, Android 15</i>
Device / Browser	<i>e.g. iPhone 15, Pixel 8, Chrome 131</i>	App Version	<i>e.g. 4.512.10000</i>
Build Number	<i>Internal build or commit hash</i>	Test Environment	<i>Staging / Production / QA / Local</i>

4. Reproduction Details

Preconditions

List setup required before reproducing (account type, location, payment method, etc.)

Steps to Reproduce

- Step one*
- Step two*

3. Step three 4. Observe result
Expected Result <i>What should happen according to requirements or test scenario</i>
Actual Result <i>What actually happened (include error messages, wrong UI, crash, etc.)</i>

5. Evidence & Impact

Screenshots / Video	<i>Attach files or paste links</i>	Logs / Crash ID	<i>Log snippet, Sentry ID, or crash report ref</i>
User Impact	<i>Who is affected and how (blocker, workaround available, etc.)</i>	Regression	<i>Yes / No — did this work in a previous release?</i>
Additional Notes <i>Workarounds, related bugs, customer reports, or other context</i>			

6. Resolution (filled by dev/QA on closure)

Root Cause	<i>Brief technical cause</i>	Fix Version	<i>Release or build where fixed</i>
Verified By	<i>QA tester name</i>	Verified Date	<i>YYYY-MM-DD</i>
Verification Notes <i>Retest steps and result after fix</i>			

Priority: P0 = release blocker / P1 = high / P2 = low. Severity: Critical = crash/data loss / High = major feature broken / Medium = partial impact / Low = cosmetic/minor.
